

#Python Comments in your code

- Python ignores comments.
- #Comment lines begins with hash tag #
- #This is what a comment line looks like.
- Use comments throughout your program to describe what your code is trying to do.

Sample Program with Comments

```
#This is a comment to describe printing Hello  
print("Hello")
```

Sample Program with **Comments on the same line**

```
print("Hello")      #Comments on same line
```

Sample Program with **Multi-line Comments**

**#This program will calculate
#weekly payroll.**

hrs_Worked = 20

weekPay = hrs_Worked * 8.00

print(weekPay)
