In-Class Exercise - Python File Handling (Save As: filelyrics.py)

INSTRUCTIONS: **- Read the statements below and perform the tasks. Add comments before each item.**

1. Create a **lyrics.txt** text file. Search for lyrics of a song and enter in your lyrics.txt file.

2. Create a Python program, save as **filelyrics.py.** (Save both files in the same location).

3. Open the lyrics.txt file for reading.

4. Read the entire contents of the file and display.

5. Read just the first 10 characters of the file and display.

6. Read just the first line of the file and display.

7. Read and display just the first couple of verses of your lyrics file.

8. Using a For Loop, read the entire contents of the file and display.

9. Write a new line to the text file and then display the text file.

10. Close the file when you are done.
