

Python Modules (math)

Math Module – several functions that perform basic mathematical operations.

```
>>>import math
```

```
>>>dir(math)
```

#Take a look at all the math methods.

```
>>>help(math)
```

Math Module — several functions that perform basic mathematical operations.

```
import math  
print(math.pi)  
print(math.sqrt(number))  
print(math.pow(intnum1,intnum2))  
print(math.ceil(float_number))  
print(math.floor(float_number))
```
