script.py   IPython Shell

```python
1   # Program to sort alphabetically the words form a string provided by the user
2
3   # change this value for a different result
4   my_str = "Hello this Is an Example With cased letters"
5
6   # uncomment to take input from the user
7   #my_str = input("Enter a string: ")
8
9   # breakdown the string into a list of words
10  words = my_str.split()
11
12  # sort the list
13  words.sort()
14
15  # display the sorted words
16
17  print("The sorted words are:")
18  for word in words:
19      print(word)
```
