

Databases in Your Everyday Life

Whether you realize it or not, databases are everywhere. A database is a collection of objects that is easily accessed, managed and updated. Databases range from relational databases to cloud databases.

INSTRUCTIONS: Send me an email with your responses to the following:

To: yvonne.flores@guamcc.edu
Cc: your email address
Subject: **CS151-## Everyday Databases**

EXERCISE:

1. You have probably visited a store or a customer service provider on Guam in the past month.
 - **Identify** the store or customer service provider.
 - **Explain** how a database was used when you went through the checkout or customer service process.
2. Using the Internet is a part of our daily lives.
 - **Identify two** web sites that you use.
 - **Explain** how each web site uses a database.
3. Here at GCC you have declared your major program of study or have an idea of your area of interest.
 - In your area of study or interest, **explain** how you would use a database.
