

## In- Class Exercise – JS Arrays

**INSTRUCTIONS:** - Read the statements below and perform the tasks. Save as `music_array.html`

### HTML Element

`<p id="demo1"></p>`

1. Create an array named **styles** with items **"Jazz"**, **"Blues"**, and **"Pop"**, then change a HTML element **"demo1"** to display the array.
2. Strip off the last value of the array then display the array in the **"demo2"** HTML element.
3. Append **"Rock-n-Roll"** to the end of the array then display the array in the **"demo3"** HTML element.
4. Strip off the first value of the array and then display the array in the **"demo4"** HTML element.
5. Add **"Reggae"** to the beginning to the array and then display the array in the **"demo5"** element.
6. Sort the array alphabetically and then display the array in the **"demo6"** element.
