

In- Class Exercise – JS Output (out HTML)

INSTRUCTIONS: - Read the statements below and perform the tasks.

1. Create a HTML document, save as: **Islands.html**
2. Use “Largest Islands” as content of the title element.
3. Add Largest Island as a h1 element in the document body.
4. Add a script section to the document body.
5. In the script section, declare, create and initialize the following variables:

island1Name	Greenland
create a variable	New Guinea
create a variable	Borneo
create a variable	Madagascar
create a variable	Baffin
island1Size	2175600
create a variable	790000
create a variable	737000
create a variable	587000
create a variable	507000

6. Use document.write to output to the HTML document the following 5 islands and their size as follows:

**The largest island in the world is *variable* with *variable* miles.
The second island in the world is *variable* with *variable* miles.
etc.....**
