

JS Quiz Project

index.html

1. Create a **JS_Quiz** folder. Save the **index.html**, **styles.css**, **app.js** file in the folder.
2. Open the **index.html** file in Notepad.
3. <title> - Enter a Title for your Quiz
4. <h1> - Enter an appropriate Web Page Title
5. Question #1:
 - Modify the question.
 - Change the textbox to a radio button. (*HINT: Look at the next question)
 - Add 3 choices.
6. Question #2:
 - Modify the question.
 - Add 3 choices.
7. Question #3:
 - Modify the question.
 - Add 3 choices.
8. Modify the Button text.

JS Quiz Project

app.js

9. Open the **app.js** JavaScript file.
10. Search the Internet for 3 pictures. Save the pictures in **JS_Quiz** folder.
11. Enter 3 picture file names in the **pictures** [array].
pictures = ["picture filename0", "picture filename1", "picture filename2"]
12. Enter 3 messages in the **messages** [array]. See the table below for the example.

messages = ["message0", "message1", "message2"]

	messages[0]	messages[1]	messages[2]
messages array	Example: Great Job!	Example: That's just OK!	Example: You really need to do better!
	Come up you're your own message0	Come up you're your own message1	Come up you're your own message2

13. Modify your **if block** to correspond to the correct answer for each of your 3 questions on your quiz.
