

Python Project 5

INSTRUCTIONS:

1. Create a Python program. Save As: **newsalary.py**
2. Include the necessary Program Header and use descriptive comments.

Scenario: Teachers in most school districts are paid on a schedule that provides a salary based on their number of years of teaching experience. Starting teaching salary is \$30,000. After the first year, a teacher receives a 2% salary increase.

3. Write a program that creates a table of the following:
 - a. Column 1: Year Number (1 – 10), left-aligned.
 - b. Column 2: New Salary after 2% increase from the previous year, written with \$ (2 decimal places).
 - c. For help for printing number formats, see PyFormat (<https://pyformat.info/>)
 - Use the '{:f}'.format.
