Working with Tuples
(freecodecamp video)

Create a Tuple

#Create a tuple

coordinates = (4, 5)

#Print certain elements in the tuple

print(coordinates[0])

print(coordinates[1])

Can you change the Tuple?

coordinates = (4, 5)

#Can you change the data in the tuple?

coordinates[1] = 10   **#What is the output?**

Tuple with Mixed Data – a [list] of (tuples)

coordinates = [(4, 5), (6, 7), (80, 34)]

#Change the data in the tuple.

coordinates[1] = 10   #What is the output?
