

## In-Class Exercise - Python User-Defined Function (Save As: **max2nums.py**)

**INSTRUCTIONS:** - Read the statements below and perform the tasks. Create a User-Defined Function.

1. Prompt the user for two numbers, name the variables **num1** and **num2**.
2. Create a user-defined function called **max2nums**.
3. Pass the 2 variables as arguments to the function.
  - In the function body, **return the maximum of the 2 numbers**.
4. Outside the function, print the largest number.
