

Hepatitis A

The source for hepatitis a

Hepatitis A is a liver disease caused by the hepatitis A virus (HAV). The virus is primarily spread when an uninfected (and unvaccinated) person ingests food or water that is contaminated with the faeces of an infected person.

Food commonly linked with the hepatitis a

You eat or drink food or water that has been contaminated by stools (feces) containing the hepatitis A virus. Unpeeled and uncooked fruits and vegetables, shellfish, ice, and water are common sources of the disease. You come in contact with the stool or blood of a person who currently has the disease.

Measures that can be taken to prevent the hepatitis a from causing illness

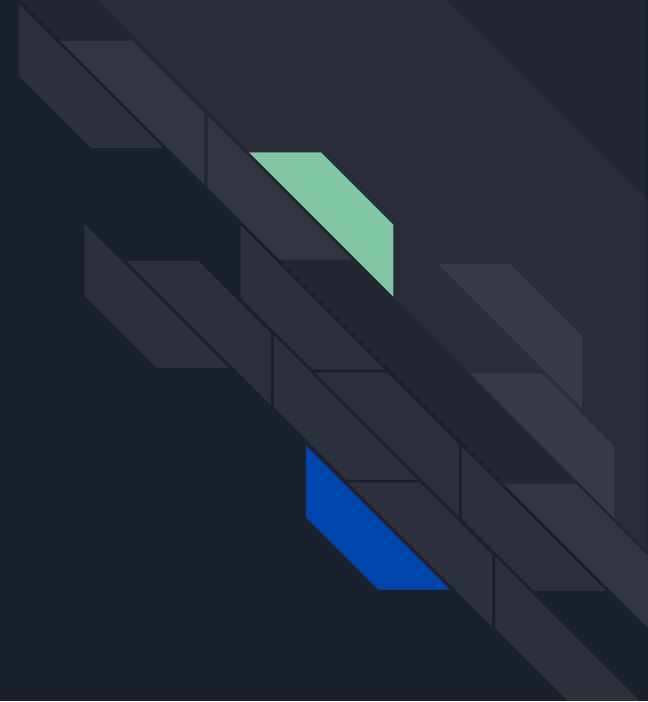

Always wash your hands thoroughly after using the restroom and when you come in contact with an infected person's blood, stools, or other bodily fluid.

Avoid unclean food and water.

Teach The Bug Rubric

Assessment Rubric: (4-1) Grading Scale

Grading Criteria	Excellent (4)	Good (3)	Fair (2)	Poor (1)
Organization Guidelines of powerpoint slides were followed	4			
Quality of information The student demonstrates full knowledge of the topic by answering all questions with explanations and elaboration.	4			
References The student used a variety of sources and has properly cited sources.	4			
Speaking & Eye Contact The student maintains eye contact, excellent volume & clarity for the audience. Enthusiasm is evident when speaking.				1
Creativity Information flows nicely, visual aids are creative, neat, colorful, etc.		3		
Comments: Good job on your slides! Points deducted for no presentation. I would suggest adding some visuals.
