Summative Report:

The College does not have its own humane stray dog traps. The Environmental and Safety Office (EHS) depends on the availability of traps at the Department of Agriculture (DoA). EHS continuously communicate with the DoA on our need for traps to catch these stray dogs on our campus. The traps are hard to come by as the whole island depends on the DoA to help with stray dogs.

During the fall semester; however, there were five (5) stray dogs that were comfortably adopt our campus as their habitual residence. Out of the five stray dogs, three (3) females were caught with the assistance of DoA traps. The remaining stray as of March 2023 that are comfortably residing on our campus are one (1) and (1) female.

In addition to these two habitual resident stray dogs, there are two or three dogs that are transient. They come and go from our campus.

Safety Issues:

The safety issues associated with these stray dogs are they look for food and ask for food from students and employees. At times, they seemed to get aggressive when they after people to ask for food. At other times, they bark and display aggressive behaviors. Other than their behaviors, they are potential carriers of unwanted flees or unknown viruses or diseases.

Delay:

The cause of delay is the limited humane stray dog trap and human capacity at the DoA.

Action Plan:

EHS has obtained price quotes on humane stray dog traps. The Environmental Health & Safety Officer needs to inspect these quoted traps to see if they are suitable for the task of catching the stray dogs. The College will obtain its humane stray dog trap. EHS will initiate the trapping of these stray dogs with the assistance of the Student Support Services Offices. The caught stray dogs will be referred to GAIN or other shelters for care or adoption.
