### *Presentation Project Assess Student Learning Outcome.*

---

Make a presentation file with Power Point. This is a group project consisting of 3 or 4 students.

When you make the presentation file, you need to add some picture related with your answers and make a good organization for a clear understanding.

Step 1: Discuss the questions with your group members.

Step 2: Make the presentation file with Power Point.

Step 3: Present your PowerPoint in front of the class.

1. Define the terms:

- |                             |                             |
|-----------------------------|-----------------------------|
| a) productivity application | b) word processing software |
| c) presentation software    | d) spreadsheet software     |

2. Explain the role of the operating system (operating software).

3. Explain cloud app, web app and a mobile web app.

4. Explain retail software, custom software, and shareware.

5. Describe the activity that occurs during project development.
