

# Guam Community College: Results of Faculty Online Teaching Survey

May 4, 2014

Dr. Ann V. Doty, Sr. Systems Consultant  
Academic, Web and Grants Services

**Do you have a philosophy about teaching courses at Guam Community College? Please describe fully.**

**Text Entry**

Two ways interactions

My philosophy is to always follow Guam Community College's mission statement

I believe that anyone is capable of learning anything. It does not matter how difficult it may be, hard work and good charecter will carry us forward. I am resposible not only for a students education but also the charecter needed to succeed.

Every student has the capability of learning, regardless of their background.

Teach through experience and knowledge.

I believe in empowering students to step into their identities as writers in order for them to have control over every aspect of their lives. This training includes an understanding of the writing process, seeing written works as machines with their various parts, and rigorous writing practice that incorporates peer review and feedback.

Participation is a very large part of learning. If I am unable to convince students to participate in class through the way I teach, then I try to teach in a way that will allow them to learn and in turn participate.

I am sorry but I do not understand this question.

Student Success is directly related to the relationships they cultivate with instructors, and the instructional methodologies instructors continue to develop.

As a former high school English teacher, I commit to teaching at GCC so that I may see the reality of students' writing abilities after high school. With guided instruction, practice, and reinforcement, students should be able to improve and get one step closer to completing their English requirements.

Please indicate the program or department with which you are affiliated.
